Achieving prosperous, inclusive and sustainable solutions, to secure the future of the planet, its people and its resources for the long term, is a challenge to be taken on by our generation. For this, dialogue, collaboration and action are key. In line with its corporate social responsibility, ILF incorporates engagement and participation within the company and across its projects.
SOCIAL

With a focus on giving individuals, groups and communities “a voice”, social management at ILF enables conversations that matter. The cultivation of relationships is of particular benefit and is becoming increasingly known and valued worldwide. By integrating social management experts into the life cycle of projects, different voices are heard, validated and responsibly reported. Thus the effects that the project and any attributed policies have on people are carefully considered and quantified.

Furthermore, ILF responsibly manages societal changes induced by technical development. For this, applicable and action oriented outputs, which are appreciated, are devised and deployed. This approach enhances the overall outcome for everyone involved.

“Social Management at ILF aims to generate value for clients, stakeholders, society and individuals alike.”

Klaus Lässer, CEO
